

Q-Sync

Features & Benefit

Smartphone Control for Q-Motion Roller Blinds

Our smartphones and tablets are increasingly important in our daily lives. Q-motion Technology blinds are as convenient to control as your phones.

With the addition of Q-sync technology, Q-motion Blinds move up and down easier than sending a text message.

Q-sync works with the Q-motion App available in your app store today. It transforms a smartphone or tablet into the most elegant and functional transmitter for Q-motion Blinds.

Simple and easy to set up:

- Download the latest version of the software Smartphone and Tablet control from many units on the same Q-sync network system
- Plug the Q-sync into the network, and it sends Q-motion commands as a standard transmitter would
- Use names to identify windows, groups or zones
- Create groups of blinds that can be controlled with the App together
- Control up to 450 blinds or groups from each Q-sync
- Setup once on a single device, then the settings load to the other smartphones and tablets automatically

Product Information

TRANSFORMER VOLTAGE:

9V DC power adapter

CONNECTIONS:

Ethernet through RJ-45

MAXIMUM SHADES:

Over450

TRANSMISSION RANGE:

15 metres (dependant on structures and walls between Q-sync and device)
