

Q-Motion - Gen 2

Set a Custom Top Limit

It is possible to set custom top limit on the blind. Although the blind will return to this location each time, a hard set to the bumpers is required every 50 operations (this happens automatically)

1. Press the UP button once to send the blind to the full open position

2. Press and HOLD the UP button

3. The blind will move down approximately 10cm then back up

4. Immediately release the UP button after you see the blind jog up/down

5. Within 10 seconds, pull DOWN on the bottom bar more than 50mm

6. Move the blind to the NEW TOP LIMIT position by pulling down on the bottom bar or by rolling up the blind by hand to the desired up limit position

7. Press and HOLD the UP button until the blind starts moving

8. The blind will now retract all the way up to the hard stop, then return to the new TOP limit position
