RTS Motor Hardwired
Creating a group channel

Note: The following steps should be taken when wanting to move multiple product's from a single channel to a group channel. E.g. Channel 1 operates blind 1 and channel 2 operates blind 2; grouping allows both blinds to operate on a single channel.

```
                    ┌───────────┐
                    │   Start   │
                    └─────┬─────┘
                          │
                          ▼
              ┌───────────────────────┐
              │ Select the source     │◄──────────────┐
              │ channel of the        │               │
              │ motor to be copied    │               │
              └───────────┬───────────┘               │
                          ▼                           │
              ┌───────────────────────┐               │
              │ Hold the              │               │
              │ programming           │               │
              │ button for 3          │               │
              │ seconds               │               │
              └───────────┬───────────┘               │
                          ▼                           │
              ┌───────────────────────┐               │
              │ The motor             │               │
              │ jiggles               │               │
              └───────────┬───────────┘               │
                          ▼                           │
              ┌───────────────────────┐               │
              │ Go to the elected     │               │
              │ group channel         │               │
              │ (this can be          │               │
